Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó
Sequence 21, Application US/08810009

Patent No. 6211437

GENERAL INPORMATION:
APPLICANT: Briggs, Steven P.
APPLICANT: Johal, Gurmukh S.
APPLICANT: Johal, Gurmukh S.
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR CONTROLLING
TITLE OF INVENTION: CELL DEATH AND DISEASE RESISTANCE IN PLANTS
NUMBER OF SEQUENCES: 65
CORRESPONDENCE ADDRESS:
ADDRESSEE: BELL, SELTZER, PARK & GIBSON
STREET: P.O. Drawer 34009
CITT C CHARILOLLE

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

dihydronaphthalene-1,2-diol + NAD(+).

COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

PATHWAX: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES
CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF
DIBENACTHIOPHENE (DBT) AND PHENNATHRENE. CONVERTS PHENANTHENE TO
1-HYDROXY-2-NAPTHOIC ACID AND THE METABOLISM OF DBT IS LIMITED TO
OXIDATION OF THE AROMATIC RING.
                                                                          SUBGNITT: NAPHTHALENE DIOXYGENASE (NDO) MULTICOMPONENT ENZYME SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT AND AN IRON SULFUR PROTEIN (ISP). THE ELECTRON TRANSFER COMPONENT IS COMPOSED OF FERREDOXIN REDUCTAGE (NDOR) AND FERREDOXIN (NDOA), AND ISP IS COMPOSED OF A LARGE ALPHA SUBGNIT (NDOB) AND A SMALL BETA SUBGNIT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CATALYTIC ACTIVITY: Naphthalene + NADH + O(2) = (1R,2S)-1,2-dinydronaphthalene-1,2-diol + NAD(+).

GOFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

PATHWAY: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES
CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF
DIBENZOTHIOPHENE (DBT) AND PHENAMTHRENE. CONVERTS PHENANTHRENE
1-HYDROXY-2-NAPTHOIC ACID AND THE METABOLISM OF DBT IS LIMITED
OXIDATION OF THE AROMATIC RING.
SUBUNIT: NAPHTHALENE DIOXXCENASE (NDO) MULTICOMPONENT ENZYME
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "The molecular analysis of an NAH7-type gene cluster, pah, located the chromosome of Pseudomonas aeruginosa PaK1."; Submitted (APR-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: COMPONENT OF NAHALENE DIOXYGENASE (NDD) MULTICOMPONENT ENZYME SYSTEM WHICH CATALYZES THE INCORPORATION BOTH ATOMS OF WOLECULAR OXYGEN INTO NAPHTHALENE TO FORM CIS-

J. Bacteriol. 178:2158-2158(1996).
-!- CATALYITC ACTIVITY: Biphenyl + NADH + O(2) = (2R,3S)-3-phenylcyclohexa-3,5-diene-1,2-diol + NAD(+).
-!- COFACTOR: Binds 1 2Fe-2S cluster and 1 iron atom per subunit.
-!- PATHWAY: Biphenyl-polychlorinated biphenyl degradation pathway;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BphE subunits. A ferredoxin (BphF) and a ferredoxin reductase (BphG) must be present to obtain activity. SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING DIOXYGENASE ALPHA SUBUNIT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Biphenyl dioxygenase alpha subunit (EC 1.14.12.18) (Biphenyl 2,3-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        rerization of the oxygenase component of from Pseudomonas sp. strain LB400.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Nucleotide sequencing and transcriptional mapping of the genes encoding biphenyl dioxygenase, a multicomponent polychlorinated-biphenyl-degrading enzyme in Pseudomonas strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Burkholderia cepacia (Pseudomonas cepacia).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Irie S., Doi S., Yorifuji T., Takagi M., Yano K.;
"Nucleotide sequencing and characterization of the genes encodin benzene oxidation enzymes of Pseudomonas putida.";
J. Bacteriol. 169:574-5179(1987).
-!- CATALYTIC ACTIVITY: Benzene + NADH + O(2) = cis-1,2-diptrobenzene-1,2-diol + NAD(+).
-!- COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.
-!- COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.
-!- PATHWAY: FIRST STEP OF DECRADATION OF BENZENE TO CATECHOL.
-!- SUBUNIT: THIS DIOXYGENASE SYSTEM CONSISTS OF FOUR PROTEINS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TWO SUBUNITS OF THE HYDROXYLASE COMPONENT (BNZA AND BNZB), FERREDOXIN (BNZC) AND A FERREDOXIN REDUCTASE (BNZD). SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING DIOXYGENASE ALPHA SUBUNIT FAMILY.
